

Fractionation

MICROPORE's novel slotted microfiltration membranes can separate particles into separate size fractions when using high shear at the membrane surface

FRACTIONATION

- Removal of fines
- Splits to closely sized fractions
- Surface filters avoid plugging
- Fractionate and filter systems
- Ideal for use in solvent systems

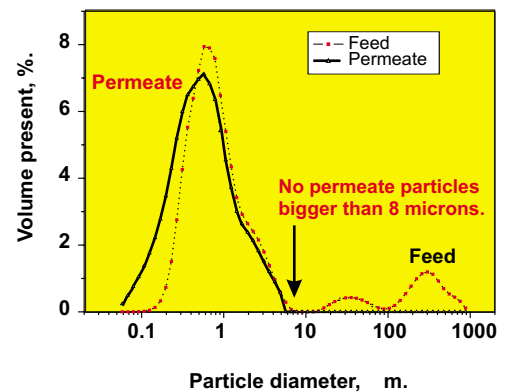

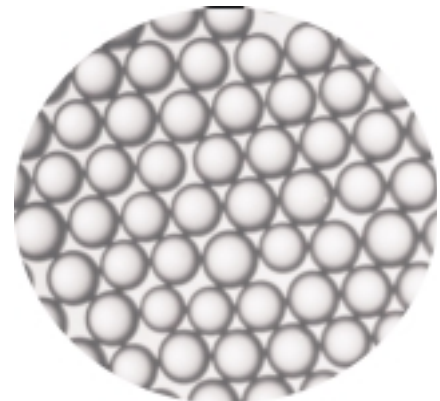

a distribution fractionated by a VibraFilter

example application:

POLYMER LATEX

- Removal of **oversize** from a concentrated product
- Removal of **undersize** from a product
- Operates in...
 - high concentrations
 - high viscosities
 - high temperatures
 - aggressive conditions

oversize removal during 20% v/v latex production
